AI & DATA SCIENCE UNDERGRADUATE | PYTHON & MACHINE LEARNING FOCUS

AI & Data Science undergraduate focused on building AI-powered applications using NLP, LLMs, and full-stack technologies. Experienced in developing end-to-end systems involving resume parsing, semantic matching, and real-time analytics. Strong foundation in Data Structures & Algorithms with practical problem-solving experience.

TECHNICAL SKILLS

- Languages: Python, Java, C
- AI/ML: Machine Learning, NLP, Model Evaluation, EDA
- Libraries: NumPy, Pandas, Matplotlib, scikit-learn
- Frameworks & Tools: React.js, Node.js, MongoDB (working knowledge), Git, Jupyter Notebook
- Core CS: Data Structures & Algorithms, OOP

PROJECT EXPERIENCE

AI Career Copilot – AI/NLP-Based Career Optimization System

- Developed an AI-driven career assistant using React, Node.js, MongoDB, and GPT-3.5 for end-to-end job search optimization
- Implemented an NLP pipeline for resume understanding, enabling structured skill extraction and contextual analysis from unstructured text
- Built a semantic matching and skill gap analysis engine to align candidate profiles with job requirements
- Integrated LLM-based modules for resume enhancement, interview prep, and personalized career recommendations

Interview Preparation Platform – AI-Powered Practice System

- Built an AI-powered interview platform enabling users to practice coding, system design, and behavioral questions with real-time evaluation and feedback
- Implemented AI-based question generation and scoring system to deliver personalized and adaptive practice sessions
- Developed a performance analytics dashboard to track user progress, identify weak areas, and monitor improvement trends
- Designed a session management system for customizable interview practice workflows
- Engineered a full-stack architecture using React, Node.js/Express, MongoDB, and JWT authentication

Smart Traffic Monitoring System (Edge Computing)

Academic Project (Design-Focused)

- Designed a real-time traffic monitoring system using Computer Vision for vehicle detection and congestion analysis
- Proposed a low-latency edge-cloud architecture to enable scalable and efficient traffic data processing
- Planned integration of YOLO-based object detection with edge devices for faster inference and reduced latency
- Tech Stack: Python, OpenCV, YOLO, Flask/Node.js, React

EDUCATION

Bachelor of Technology – Artificial Intelligence & Data Science

Vivekanand Education Society Institute of Technology (VESIT),

Mumbai Expected Graduation: May 2027

Certifications & Co-Curricular Activities

Certifications:

- AWS Academy Graduate – Cloud Developing
- AWS Academy Graduate – Cloud Foundations
- Fundamentals of Deep Learning – NVIDIA
- Complete Data Science, Machine Learning, Deep Learning & NLP Bootcamp – Udemy
- Generative AI & ChatGPT – Udemy
- Git & GitHub Bootcamp – Udemy

Hackathons : Syrus'25(VESIT) , Invictus'26(VESIT)

Areas of Interest

- Machine Learning & NLP Systems
- Generative AI Applications
- Data-Driven System Design
