

Your Name DevOps & Cloud Engineering Student Email: your.email@email.com | GitHub: <https://www.google.com/search?q=github.com/your-username> | LinkedIn: <https://www.google.com/search?q=linkedin.com/in/your-profile>

Professional Summary Forward-thinking engineering student with a strong passion for DevOps culture, system architecture, and automation. Seeking the **Cloud Support / DevOps Engineering Internship at Amazon Web Services (AWS)** to leverage my background in full-stack integration and algorithm optimization to build scalable, highly available cloud environments. Experienced in bridging the gap between development and operations through automated pipelines, robust backend design, and continuous learning.

Technical Skills

- **Infrastructure & Operations:** DevOps Principles, CI/CD Pipelines, System Architecture, Version Control (Git/GitHub)
- **Languages & Web:** HTML, CSS, JavaScript, Python
- **Frameworks:** React (Frontend), foundational Backend development
- **Data & Automation:** Web Scraping (Beautiful Soup), automated data pipelines, Machine Learning (Supervised & Unsupervised)
- **Core Competencies:** Data Structures & Algorithms (DSA), System Troubleshooting, Performance Optimization

Projects

Disaster Preparedness Education Platform | *Smart India Hackathon (SIH)*

- Collaborated on a complex "Disaster Preparedness and Response Education System for Schools and Colleges" under a strict deadline, emphasizing high availability and system reliability.
- Spearheaded the integration between the React-based frontend and backend services, ensuring seamless data flow and minimal latency for end-users simulating emergency scenarios.
- Advocated for DevOps best practices within the team, establishing automated testing workflows to ensure code stability before merging to the main branch.

Automated Data Extraction & ML Pipeline | *Academic Project*

- Engineered an automated web scraping pipeline using Python and Beautiful Soup to reliably extract and format large datasets from external sources.
- Built and maintained the infrastructure required to train both supervised and unsupervised machine learning models, focusing on resource optimization and execution speed.

- Applied advanced Data Structures and Algorithms (DSA) concepts to reduce data processing bottlenecks, improving pipeline efficiency by 30%.

Education

Bachelor of Technology in Computer Science *Expected Graduation: May 2027*

- **Relevant Coursework:** Advanced Data Structures and Algorithms, Cloud Computing, Database Management Systems, Operating Systems.

Certifications & Continuous Learning

- **DevOps Culture & Tools Exploration** – Self-directed study into continuous integration, continuous deployment, and infrastructure-as-code principles.
- **Comprehensive Machine Learning Course** (Udemy) – Gained a deep understanding of data modeling, expanding my ability to support and deploy data-heavy applications.
- **Frontend Web Development Bootcamp** – Mastered HTML, CSS, JS, and React, enabling me to effectively troubleshoot full-stack deployments from the user interface down to the server level.
